

Week 3: Data Processing in MISP

We deployed a local MISP instance using Docker Compose and created an unpublished event for the Remote PowerShell via WinRM research topic. We imported the SHA-256 sample examined in Week 2 and added three links to Microsoft Threat Intelligence and MITRE ATT&CK as contextual references. The hash is included as a research sample; its direct connection to Storm-0501 or Evil-WinRM has not been confirmed.

Warnings

Contextualisation
Your event has neither tags nor galaxy clusters attached - generally adding context to an event allows for quicker decision making and more accurate filtering, it is highly recommended that you label your events to the best of your ability.

Filtering and Normalization.

Collected data	Normalization and filtering	Decision
SHA-256 f4ec2dba070a9ecd1 dee342329b0cd7caa 406cd4995c41b9aa b9aea9b73cd06d from the Week 2 report	Recorded as a complete, lowercase 64-character SHA-256 value. Its source and attribution limit were documented.	Added to MISP as a research sample. Its connection to Storm- 0501 or Evil-WinRM is not confirmed.
Three Microsoft and MITRE ATT&CK URLs	Kept as complete links and classified as External analysis - link.	Added to MISP as references, not malicious IOCs.
Shodan IP 154.57.211.62	Separated the observation “WinRM is exposed” from the claim “this host was used in an attack”.	Excluded from MISP: the Week 2 data does not confirm compromise.
Azure IP 20.99.133.109	Checked its context in the Week 2 analysis; an observed connection alone does not establish maliciousness.	Excluded as a malicious IOC.

Filtering and normalization were performed manually using the Week 2 findings. The MISP event remains unpublished because the sample hash has not been attributed to the investigated attack.

Conclusion

We applied manual filtering by excluding IP addresses for which the Week 2 research did not establish malicious activity. We normalized the retained data by recording the complete lowercase SHA-256 value and classifying the URLs as external analysis links in MISP. The event remains unpublished.
